# How we do it here – Selecting Alternatives

Darrick A. Killen, P.Eng
Updated Feb 2010

Every decision,

whether it is at home or at the workplace,

is simply a choice between options.

### Retaining Wall Example

- Agree on basic requirements
  - Length; height; shape
- Consider alternative solutions
  - Exposed aggregate; concrete timber; stone; interlocking blocks
- Which is most important
  - Price or appearance; can you do it yourself or do you have to hire someone

# We tend to make decisions in our head or on the fly based on experience or knowledge.

If we didn't, we would never survive!

# However, there are several issues associated with making decisions on the fly:

- 1. People forget, people leave, data is lost, traceability is lost
- 2. Would you have come to the same conclusion if you had performed a detailed Options Analysis?

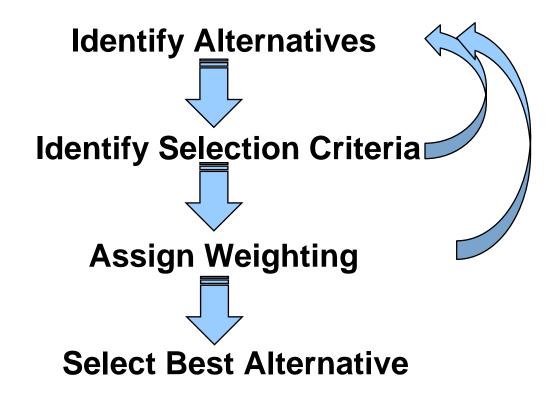

Both have consequence to our projects and business.

#### **CMMI** Quote

"Formal evaluation processes reduce the subjective nature of decisions and have a higher probability of selecting a solution that meets multiple demands"

# **Way Ahead**

# Do we need to document every decision?

#### **Answer: EP206 Provides Guidelines:**

- Are alternatives considered to be of medium or high risk?
- Are alternatives related to changing work products under Configuration Management?
- Could the selection of an alternative impact agreed upon schedules?
- ....impact agreed upon budgets?
- ....impact agreed upon project objectives?
- Is the cost of conducting a formal evaluation reasonable compared to potential impacts?

2<sup>nd</sup> Answer: "Baby Steps"

If we make good core decisions at the lower level, then the high level design will be stable and work the first time, keeping rework costs down.

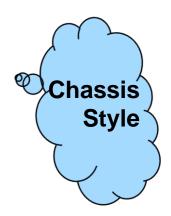

# Engineering Procedure EP206 Selecting Alternatives

Note: The data provided on the following slides is fictitious and is provided only as an example.

#### **Create an Excel Workbook with Six Tabs:**

**Introduction:** defines the problem, the stakeholders, timelines, and other logistics.

**Evaluation Criteria**: defines the criteria for an optimal solution.

**Criteria Weighting:** defines the most important criteria and uses this weighting to ensure the most effective alternative is selected.

**Matrix:** provides a matrix of alternatives versus the agreed upon criteria.

Conclusion: documents the findings of the comparison.

**Recommendation:** documents the recommendation based on the agreed upon weighted criteria.

#### **Introduction Tab**

| Project      | Ground Facilities Upgrade  |  |  |  |  |
|--------------|--|--|--|--|--|
| Topic        | Ethernet Card Selection  |  |  |  |  |
| Engineer     | John Smith   |  |  |  |  |
| Date         | 26 Feb 2007, updated 23 Mar 07   |  |  |  |  |
| Purpose      | To select a PCI Gigabit Ethernet card for the GSE Computer so that EOIR data can be downloaded |  |  |  |  |
| Stakeholders | holders 99 Wing (users), John Doe (Engineering Manager), Jane Doe (LCMM)                       |  |  |  |  |

#### **Evaluation Criteria Tab**

| Item | Evaluation Criteria   | Source/Rationale   |  |  |  |  |
|------|---|--|--|--|--|--|
| 1    | Cost  | Best Value   |  |  |  |  |
| 2    | Operating Temperature   | GSE Requirements Spec (Low temperature operation to -15 degrees C)   |  |  |  |  |
| 3    | Conformal Coating Available Conformal coating protects card from moisture, fungus, dust |  |  |  |  |  |
| 4    | MIL specs / ruggedization   | As per Requirements Spec, #####Shock requirements of MIL-STD-810F, Method 516.5Random vibration requirements of MIL-STD-810F, Method 514.5Sinusoidal vibration requirements of MIL-STD-810F, Method 514.2. |  |  |  |  |
| 5    | Number of Ports   | Number varies from 1 to 4  |  |  |  |  |
| 6    | Warranty  | Warranty typically varies from lifetime to 1-2 years   |  |  |  |  |
| 7    | Ease of Installation  | External adapters and PCMCIA cards are easier to install than an internal PCI card.  |  |  |  |  |
| 8    | Hot Swappable   | External adapters and PCMCIA cards tend to be hot swappable. PCI cards are not.  |  |  |  |  |
| 9    | Delivery Time / lead time   | Anything more than 6 weeks will impact schedule  |  |  |  |  |
| 10   | Approved Vendor List  | vendors should be on L-3 Approved Vendor List to ensure quality and reliability  |  |  |  |  |

## **Criteria Weighting Tab**

| Evaluation Criteria           | Weighting | Scores  | Justification  |
|-------------------------------|-----------|---|--|
| Cost                          | 10%       | 10 = \$10-100<br>6 = \$100-1000<br>3 = \$1000+  |  |
| Operating Temperature         | 15%       | 15 = 70 degree range<br>12 = 60 degree<br>10 = 50 degree<br>5 = 40 degree                   |  |
| Conformal Coating Available   | 15%       | 15 = yes<br>0 = no  |  |
| MIL specs / ruggedization     | 15%       | 15 = yes<br>0 = no  |  |
| Number of Ports               | 5%        | 5 = 4 or more ports<br>3 = 1-4 ports<br>1 = 1 port  | Number of ports may affect cost  |
| Varranty                      | 10%       | 10 = lifetime<br>6 = 1 or more years<br>2 = less than 1 year                                |  |
| Ease of Installation          | 0%        | 5 = installed outside chassis<br>3 = installed inside chassis                               | after subsequent analysis, ease of installation is no longer a factor                    |
| Hot Swappable                 | 0%        | 5 = hot swappable<br>0 = not hot swappable  | after subsequent analysis, hot swappable is no longer a factor                           |
| Delivery Time / lead time 15% |           | 15 = 1-2 business day<br>10 = 1-2 weeks<br>5 = more than 2 weeks<br>-10 = more than 6 weeks | delivery time may affect schedule  |
| Approved Vendor List          | 15%       | 15 = yes<br>5 = no  | approved vendors are preferable, but additional vendors can be added to list as required |
| Total (Should equal 100)      | 100%      |   |  |

#### **MatrixTab**

|         | Criteria                    | Weighting | Solution                 | 1     | Solution                 | 2     | Solution                 | 3     | Solution                 | 4     |
|---------|-----------------------------|-----------|--------------------------|-------|--------------------------|-------|--------------------------|-------|--------------------------|-------|
| jklltem |                             |           |                          |       |                          |       |                          |       |                          |       |

| 4       | MIL specs / ruggedization   | 0.15      | No                       | 0     | No                       | 0     | No                       | 0     | No                       | 0     |
| 5       | Number of Ports             | 0.05      | 1                        | 1     | 1                        | 1     | 1                        | 1     | 2                        | 3     |
| 6       | Warranty                    | 0.1       | 1 Year                   | 6     | 2 year                   | 6     | 2 Year                   | 6     | 3 year                   | 6     |
| 7       | Ease of Installation        | 0         | Inside chassis           | 0     | Inside chassis           | 0     | Inside chassis           | 0     | Inside chassis           | 0     |
| 8       | Hot Swappable               | 0         | No                       | 0     | No                       | 0     | No                       | 0     | No                       | 0     |
| 9       | Delivery Time / lead time   | 0.15      | 1-2 day                  | 15    |                          | 10    |                          | 10    | 4-5 weeks                | 5     |
| 10      | Approved Vendor List        | 0.15      | No                       | 5     | No                       | 5     |                          | 5     | No                       | 5     |
| Total   |                             | 100       |                          | 42    |                          | 37    |                          | 38    |                          | 52    |

**Summary** 

| PCI Solutions | Final Score |
|---------------|-------------|
| Item #4       | 52          |
| Item #2       | 37          |
| ltem #1       | 42          |
| Item #3       | 38          |

NOTE: The Item #4 card is way ahead due to weighting of 15 for conformal coating

#### **Conclusion Tab**

1 All solutions met the minimum port functional requirement of criterion 5.

Solution 4 scored highest due to how it can be provided with conformal coating.

#### **Recommendation Tab**

1

Given that the card will be installed in a rugged computer chassis, conformal coating is deemed unnecessary. When the conformal coating criterion is discounted, Solution 1 scores higher than Solution 4.

Solution 1 is therefore recommended, based primarily on its substantial advantages with regard to delivery and price.

#### **Application Notes:**

- Iterate as required (eg. select technology USB or PCI, then select I/O card)
- may also be effectively used for management issues such as course selection or prioritization of projects.
- Add extra worksheets to store telecons, OEM data, sub evaluations, or stakeholders' comments.
- Whenever possible, Evaluation Criteria should be traceable to a source.
  - customer requirements, derived requirements, operational scenarios, technical limitations, environmental constraints, identified risks, business case assumptions, or business objectives.
- Use working groups or peer reviews to agree on selection criteria for critical items
- Workbooks may be logged as a Design File Memo (DFM), Ref EP202
- Workbooks do not negate the requirement for a full Design Description
   Document (DDD) or associated Design Reviews (PDR/CDR). They are intended
   to augment or reinforce that process.

Keep it Simple, but keep it real

# Responsibilities

#### The Project Leader is responsible to:

- ensure that designs activities are conducted and documented to the degree warranted by the complexity of the project and the decision itself.
- ensure team members understand and are committed to documenting decisions
- ensure that the EPP identifies the tools/evaluation methods, such as EP206
- ensure that the progress of planned and unplanned design analysis is progressing
- ensure that the progress is reported to the Engineering Manager
- ensure the proper use of DFMs
- ensure records are configured/managed as per CMPs or under local project Control

#### The Engineering Manager is responsible to:

ensure that the Project Leader is doing the above items

# **Cost Impact**

Workbooks should not impact the cost of your project.

Workbooks are simply a vehicle to document your thought process.

#### Memo from the Eng Manager

#### **Decisions Analysis Records**

I would like to take this opportunity to formally remind staff of the important requirement to record decisions made during design projects. Project history should include why a particular component was selected for a particular function. The analysis that was performed needs to be documented.

EP206, Selecting Alternatives, describes a formal evaluation process through which multiple alternatives may be analyzed and an optimum alternative identified. This process uses an Excel workbook with multiple worksheets to record the analysis, conclusion, and recommendation.

Project Leads need to ensure that the project team captures all major decisions, so that any future work on that particular end item deliverable or similar design project does not have to repeat the process, arriving at the different conclusion and hence introducing risk for success on that project/end item.

John Doe Engineering Manager

# Conclusion

- Always identify alternatives!
- Select best solution based on criteria and weighting
- Not feasible to analyze every decision, keep it simple, review the core options
- Workbooks provide a good compromise for a full options analysis
- Workbooks are expected to be used on most projects
- Capture workbooks as Design File Memos (DFMs) as required

Keep it simple, but keep it real... even poor documentation may be better than no documentation

# The
